INTRO TO R - VISUALIZATION
R Workshop - 3

Rotman School of Management
UNIVERSITY OF TORONTO

R Graphics - Overview

- Base plot

- Two main plotting systems
  - lattice
  - ggplot2

- Specialized plots
  - Plot functions bundled with specific R packages
R Graphics – Base plots (examples)

https://www.stat.auckland.ac.nz/~paul/RG3e/chapter2.html

R Graphics – Two Main Plotting Systems

- R package: lattice
  - implements Trellis system by William Cleveland

- R package: ggplot2
  - implements "A Grammar of Graphics" by Leland Wilkinson
  - **Our focus today**

https://www.stat.auckland.ac.nz/~paul/RG3e/chapter4.html
https://www.stat.auckland.ac.nz/~paul/RG3e/chapter5.html

Other - Specialized Plots

- Graphic functions provided by specialized packages
  - Based on R primitive graphical engines like grid (eg. plot() in party, igraph)
  - Following a plotting system (eg. ggmap, tmap, gganimate, plotly, etc.)
  - Wrapper of plotting tools in another languages (ex. leaflet, grViz() in DiagrammeR, dygraphs)

3D tri-surface interactive plot using the plotly package
https://plot.ly/r/trisurf/
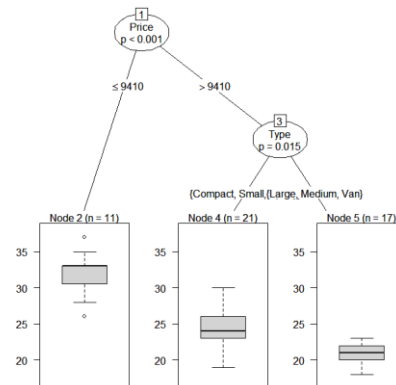

Decision tree plot using party package
https://www.statmethods.net/advstats/cart.html
Network plot using igraph package
http://kateto.net/networks-r-igraph

Specialized Plots Highlight - Time Series

https://www.quantmod.com/examples/charting/

https://rstudio.github.io/dygraphs/gallery-straw-broom.html
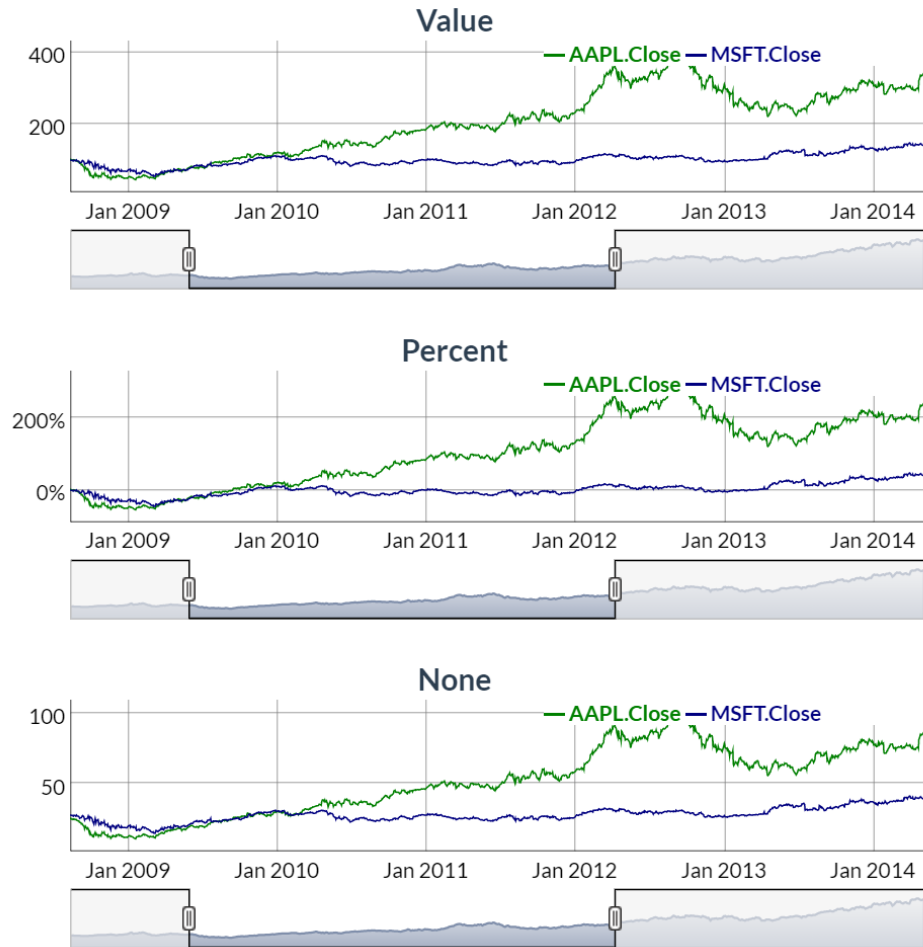

Specialized Plots Highlight - [htmlwidgets](#)

- R plots that produce interactive web visualizations

- See show cases [here](#)

- My example on the course website

Plan for today

- <mark>plotting system: ggplot()</mark>

- stock price series plot using
    - tidyquant
    - dygraph

ggplot2

- Based on the Grammar of Graphics

- Basic idea: you can build any graph from the same **components**
  - Data
  - Coordinate system
  - Geoms – visual marks that represent data points

- A **layer-by-layer** approach

A Layered Grammar of Graphics

Hadley WICKHAM

A grammar of graphics is a tool that enables us to concisely describe the components of a graphic. Such a grammar allows us to move beyond named graphics (e.g., the "scatterplot") and gain insight into the deep structure that underlies statistical graphics. This article builds on Wilkinson, Anand, and Grossman (2005), describing extensions and refinements developed while building an open source implementation of the grammar of graphics for R, ggplot2.

The topics in this article include an introduction to the grammar by working through the process of creating a plot, and discussing the components that we need. The grammar is then presented formally and compared to Wilkinson's grammar, highlighting the hierarchy of defaults, and the implications of embedding a graphical grammar into a programming language. The power of the grammar is illustrated with a selection of examples that explore different components and their interactions, in more detail. The article concludes by discussing some perceptual issues, and thinking about how we can build on the grammar to learn how to create graphical "poems."

Supplemental materials are available online.

Key Words: Grammar of graphics; Statistical graphics.

1. INTRODUCTION

What is a graphic? How can we succinctly describe a graphic? And how can we create the graphic that we have described? These are important questions for the field of statistical graphics.

One way to answer these questions is to develop a grammar: "the fundamental principles or rules of an art or science" (OED Online 1989). A good grammar will allow us to gain insight into the composition of complicated graphics, and reveal unexpected connections between seemingly different graphics (Cox 1978). A grammar provides a strong foundation for understanding a diverse range of graphics. A grammar may also help guide us on what a well-formed or correct graphic looks like, but there will still be many grammatically correct but nonsensical graphics. This is easy to see by analogy to the English language: good grammar is just the first step in creating a good sentence.

Hadley Wickham is Assistant Professor of Statistics, Rice University, Houston, TX 77030 (E-mail: h.wicham@gmail.com).

3

ggplot() – "base layer"

data

p <- ggplot(df, aes(x, y, other_aesthetics))

ggplot() – "base layer"

mapping: linking variables in the data to aesthetic elements in the plot

data

```
p <- ggplot(df, aes(x, y, other_aesthetics))
```

ggplot() – "base layer"

data

mapping: linking variables in the data to aesthetic elements in the plot

```
p <- ggplot(df, aes(x, y, other_aesthetics))
```

(x, y) coordinates
mapping

color-, size-
mapping, etc.

https://ggplot2.tidyverse.org/reference/ggplot.html

ggplot() – Add Other Layers

data

mapping: linking variables in the data to aesthetic elements in the plot

```
p <- ggplot(df, aes(x, y, other_aesthetics)) +
     another_layer +
     another_layer +
     …
```

what to plot : point, line, label, etc. (geom-, scale-functions…)

- If data and mapping are not specified in the base layer, they must be supplied in each layer added to the plot

https://ggplot2.tidyverse.org/reference/ggplot.html

ggplot() – "base layer" / example

```
   country     continent  year lifeExp       pop gdpPercap
   <fct>       <fct>      <int>   <dbl>     <int>     <dbl>
1  Afghanistan Asia        2007    43.8  31889923      975.
2  Albania     Europe      2007    76.4   3600523     5937.
3  Algeria     Africa      2007    72.3  33333216     6223.
```

```
p <- ggplot(df, aes(x = gdpPercap, y = lifeExp))
```

ggplot() – geom layers (eg. geom_point ✦)

layer specific data and mapping
If not specified, inherit from base layer

```
p + geom_point(DATA, MAPPING, STAT, POSITION, …)
```

ggplot() – geom layers (eg. geom_point 🌐)

layer specific data and mapping
If not specified, inherit from base layer

```
p + geom_point(DATA, MAPPING, STAT, POSITION, …)
```

statistical transformation &
position adjustment
e.g. `position = "jitter"`

ggplot() – geom layers (eg. geom_point)

other arguments:
e.g. `color = "red"`,
`alpha = 0.5`, etc.

layer specific data and mapping
If not specified, inherit from base layer

`p + geom_point(DATA, MAPPING, STAT, POSITION, …)`

statistical transformation &
position adjustment
e.g. `position = "jitter"`

https://ggplot2.tidyverse.org/reference/geom_point.html

ggplot() – geom_point layer / example

```
p +
    geom_point(aes(size = pop,
        color = continent),
        alpha = 0.5)
```
ggplot() – example (diamond data)

```
## # A tibble: 6 x 10
##    carat cut      color clarity depth table price     x     y     z
##    <dbl> <ord>    <ord> <ord>   <dbl> <dbl> <int> <dbl> <dbl> <dbl>
## 1  0.23  Ideal    E     SI2      61.5    55   326  3.95  3.98  2.43
## 2  0.21  Premium  E     SI1      59.8    61   326  3.89  3.84  2.31
## 3  0.23  Good     E     VS1      56.9    65   327  4.05  4.07  2.31

```
ggplot() – example (layer 1)

```
ggplot(data = diamonds, aes(carat, price)) +
```
ggplot() – example (layer 2)

```
ggplot(data = diamonds, aes(carat, price)) +
  geom_point(aes(colour = clarity),
    position = "jitter",
    alpha = 0.5,
    size = 0.8) +
```

ggplot() – example (layer 3 & layer 4)

```
ggplot(data = diamonds, aes(carat, price)) +
  geom_point(aes(colour = clarity),
    position = "jitter",
    alpha = 0.5,
    size = 0.8) +
  scale_y_continuous(trans = "log10") +
  scale_color_brewer(palette = "Spectral")
```

ggplot() – example (layer 5)

```
ggplot(data = diamonds, aes(carat, price)) +
  geom_point(aes(colour = clarity),
    position = "jitter",
    alpha=0.5,
    size = 0.8) +
  scale_y_continuous(trans = "log10") +
  scale_color_brewer(palette = "Spectral") +
  theme_minimal()
```
ggplot() – geom_histogram / example

```
# A tibble: 234 x 11

  manufacturer model      displ year   cyl trans      drv   cty   hwy fl    c
  <chr>        <chr>      <dbl> <int> <int> <chr>      <chr> <int> <int> <chr> <
1 audi         a4          1.80  1999     4 auto(l5)   f        18    29 p     c
2 audi         a4          1.80  1999     4 manual(m5) f        21    29 p     c
3 audi         a4          2.00  2008     4 manual(m6) f        20    31 p     c
```

```
ggplot(mpg, aes(x = hwy)) +
  geom_histogram(binwidth=5,
    color = "white",
    fill = "deeppink")
```

https://ggplot2.tidyverse.org/reference/geom_histogram.html

ggplot() – geom_boxplot / example
```
ggplot(mpg, aes(class, hwy)) +
   geom_boxplot(outlier.colour = "red") +
   coord_flip()
```
